DETAILED ACTION

1. Acknowledgement is made for the request to establish continued prosecution application (RCE) filed on December 22, 2003. The request for RCE is accepted and is established with the status of the application as follows:

- a. the filling date of this RCE is established as February 9, 2001;
 - b. Claims 36-41,68 and new claims 69-76 are pending. Claims 1-35, 42-67 are cancelled.
2. Applicants' response to the earlier office action filed on 12/22/2003 is considered and has been entered.

Priority

3. This application has a filling date as February 9, 2001 and claims priority to a foreign application Germany 100 06 214.8 filed on February 11, 2000. Should applicant desire to obtain the benefit of foreign priority under 35 U.S.C. 119(a)-(d) prior to declaration of an interference, a translation of the foreign application should be submitted under 37 CFR 1.55 in reply to this action.

Response to Arguments

4. Applicants' response to the office action is fully considered and found persuasive.
5. With reference to the rejection under 35 USC 102(e), Applicants' amendment and arguments are fully considered and the rejections are withdrawn herein in view of the amendment and new grounds of rejection.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 1637

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 36-41, 68-76 are rejected under 35 U.S.C. 102(e) as being anticipated by Lange (USPN. 6,071,395).

Lange teach an apparatus of claim 36, and 70-72, for detecting nucleic acids in a sample comprising

(a) a binding space for purifying the nucleic acids by immobilizing (absorption medium) the nucleic acids and separating impurities (see column 5, lines 33-67, column 9, lines 25-50);

(b) an amplification space (removal compartment) for amplifying the nucleic acids, wherein a part of removal compartment of amplification space is identical to a part of the binding space (absorption medium), i.e., at least part of removal compartment is situated in reaction chamber which has absorption medium (see column 5, lines 46-67, column 6, 10-21, column 9, lines 50-59);

(c) a detection space (chemiluminescence detector space) for detecting the nucleic acids (see column 6, lines 21-24, column 9, lines 60-66, column 10, lines 1-15).

With regard to claim 37, 73, Lange also teaches that the apparatus comprises reagents for purifying, amplifying and detecting nucleic acids (see column 9, lines 28-66, column 10, lines 1-15);

With regard to claim 38, Lange teaches that the detection space comprises a part of the amplification space and the binding space (see column 9, lines 35-66, wherein removal compartment is a part of absorption medium and detection space, see Fig. 13);

Art Unit: 1637

With regard to claims 39-40, 74-75, Lange also teaches that the binding space and amplification space comprises a capillary space (electrophoretic matrix) (see column 5, lines 46-67, Fig. 13), which is surrounded by a heatable metal layer (electrodes) (see column 4, lines 65-67, lines 52-67, column 9, lines 49-60);

With regard to claim 41, 76, Lange teaches that the capillary space (electrophoretic buffer tank) is a conductive plastic (polystyrene) (see column 5, lines 1-2);

With regard to claim 68, Lange teaches that the apparatus comprises capillary reaction vessel surrounded by a single heatable metal layer, wherein the layer is coated on the capillary reaction vessel (see Fig. 13, wherein reaction compartment 17, removal compartment 50 and detection photoamplifier 314 are surrounded by a single heatable metal layer 220);

With regard to claim 69, Lange teaches that the apparatus comprises a sample transport mechanism (through electrophoresis device) for transporting the sample and reagents through the binding space, amplification space and the detection space (see column 5, lines lines 46-67, column 6, lines 10-24, column 9, lines 28-66, column 10, lines 1-15);

Conclusion

No claims are allowable.
